THE RIGHT DATE

How a window is chosen

1. **We rule out** the moments tradition advises against: a Moon with no aspect ahead, too close to the Sun, or heading for a clash with Mars or Saturn; an eclipse within three days; Mercury or Venus retrograde, depending on the decision.
2. **We score** every planetary hour from 8 a.m. to 9 p.m., for 90 days, in your city: the Moon's phase, its sign, the planet it is heading for, the planet of the day and of the hour.
3. **We add your chart**: one more point when the Moon, Venus or Jupiter touch your Sun, your Moon or your rising sign; two fewer when Mars or Saturn clash with them.
4. **We look closely at the hour** on the ten best days: what is rising on the horizon and what stands at the top of the sky at that exact moment, where you live.

Your birth sky

Sun	Aquarius 29°16′
Moon	Sagittarius 4°00′
Rising sign	Libra 9°37′

What this report does, and what it doesn't

It compares your days with each other and shows you the ones where tradition sees the most support. Strength is not a promise: no date guarantees an outcome. The decision, and the step, remain yours. That is where the magic begins.
